

ESNts - Event Management Platform

Project Description:

A simplified event listing and management system that allows users to create, search, and join events based on category, location, and date.

Team members:

Hanna Kryhina, Katsiaryna Kozhych, Riccardo Curati

Functional Requirements

1. Authentication & Profile Management

- The system must provide a login form with email and password fields.
- The system must validate user credentials before granting access.
- The system must provide a "Forgot Password?" feature with email-based recovery.
- The system must allow users to register with name, surname, student email, and password.
- The system must allow users to update their profile details and save changes.
- The system must allow users to securely change their password.

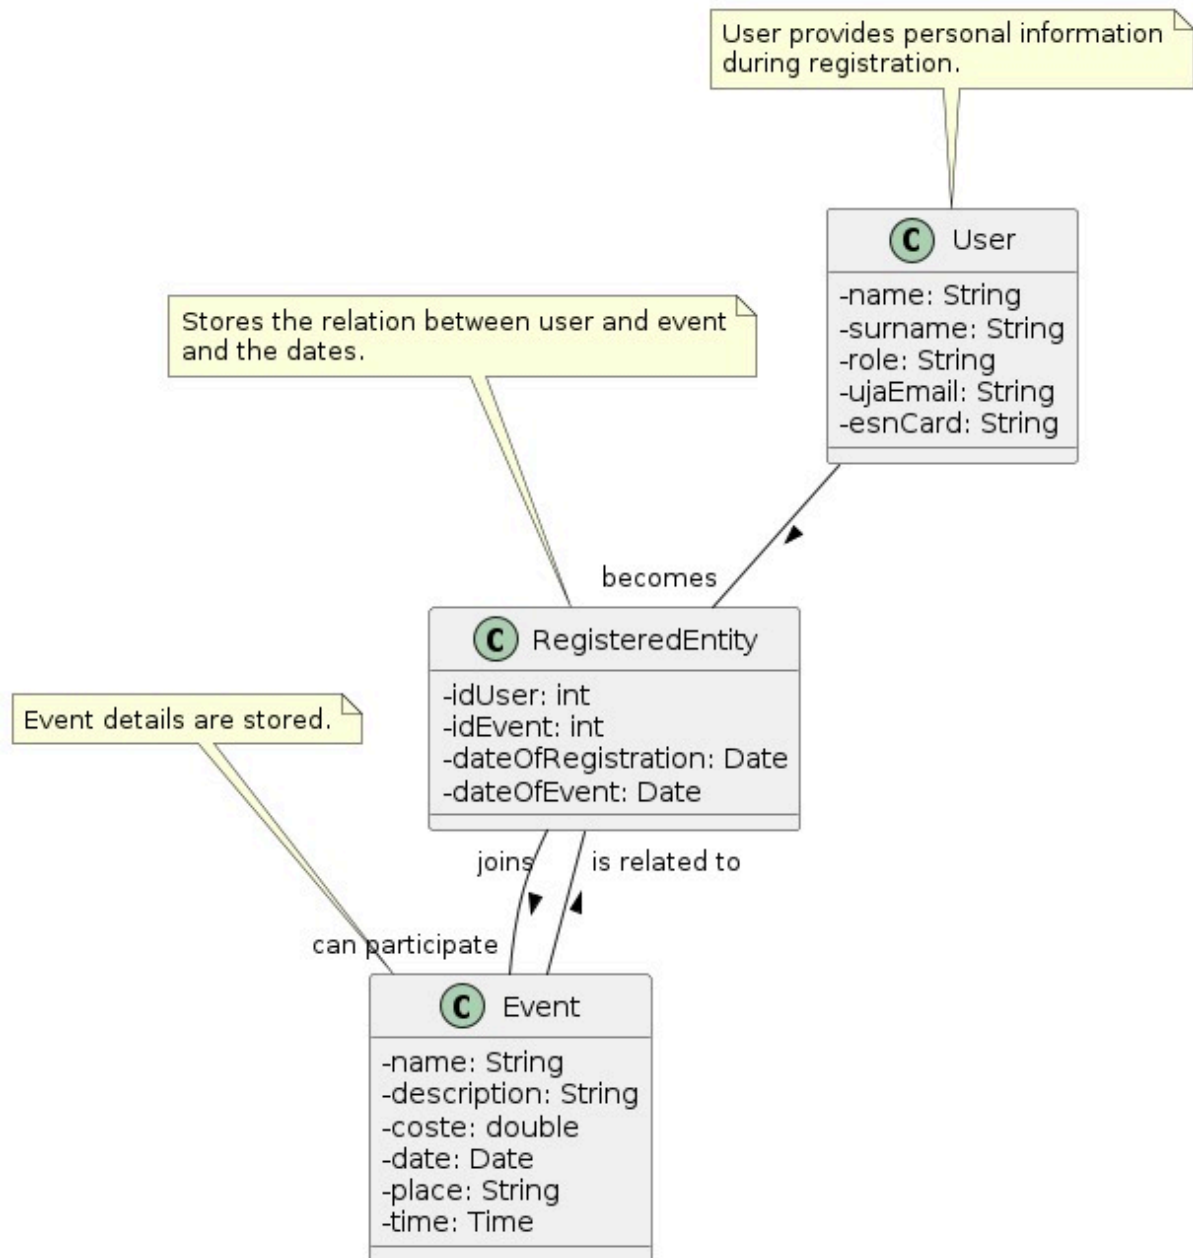

2. Event Management

- The system must display a list of upcoming events.
- The system must allow users to filter events by time (e.g., today, this week).
- The system must allow users to add new events with required fields (name, location, time, date, description).
- The system must allow event creators to edit and save changes to their events.
- The system must allow event creators to delete events.

3. Event Participation

- The system must allow users to join events.
- The system must provide a detailed event page with event information.
- The system must display a list of joined events under "Your Events."
